

Key Features & Benefits

The combination of Ease, Speed, Durability and Beauty results... That's the SpeedCove Advantage.

SpeedCove Systems create a consistent, durable, and uniform cove base quick & easy every time for utility and decorative floor coatings and overlays.

- They're easy, because they can be installed by anyone with **basic carpentry skills & tools**
- This means faster installs because everyone on the crew can be involved, no more long delays for installation, drying & project downtime
- Meets & exceeds Environmental Health Dept. code requirements
- Used in facilities for US Forest Service, FDA, Government, Military, major universities, and more in both new & remodel projects
- When coated over, it provides a **seamless, integral water & chemical proof joint** between the wall and the floor creating a monolithic polymer "containment system".
- Works with all types of floor coating systems & applications
- The preformed shape & height creates a **consistency** that makes any finish look it's best
- Ease & Speed equal quicker job turnover time & less "trip charges" for more profitability
- The **impact resistance adds increased durability** against abuse from carts, pallet jacks, etc.

SpeedCove is a impact-resistant pre-formed cove base molding made specifically for use with high performance **commercial, institutional, industrial, government, military and residential** resinous/polymer floor coatings. SpeedCove quickly and easily forms the perfect shape and height around the perimeter of a room to meet health department requirements. The new generation SpeedCove is made from an **exclusive lightweight flexible polymer composite** that is impact resistant, moisture-proof, and once installed can withstand extreme heat and cold without warping, cracking or deteriorating. When the SpeedCove and floor is coated it provides a uniform, smooth, **seamless, and integral floor-to-wall junction** for the most sanitary and easily maintained floors available.

Additional Features & Benefits:

- **Overnight and rush jobs can be completed faster & more profitably**
- Consistent, uniform 1" cove radius makes finished floors that are beautiful, and easy to clean
- Streamlined top edge eliminates a "dirt shelf", and works with all applications
- QuickSeal Edge™ on bottom is angled down to transition smoothly into the floor and to form a positive seal; eliminates most patching, and adjusts slightly for uneven floors
- Comes in **1 inch, 4 inch, 6 inch and 8 inch heights** in sections that are 48 inches long for easy shipping & handling
- 10 inch long pre-formed 90° corners **eliminate slow & inconsistent manual work**, plus joint patching is done out in the flats away from the radius for speed & ease
- **Meets highest code standards for both domestic and foreign applications**
- Flexible polymer composite allows cove base to follow general bends in wall & floor, while stiff enough to bridge over smaller imperfections
- Relief cut in back/bottom allows SpeedCove to sit tight even in un-square corners, reducing the need for excessive grinding or prep work
- **Just as fast under cabinet toe kicks and around curved walls**
- Can be tacked in place with finish nails until adhesive cures
- Base portion is ¼-inch-thick so it installs flush with tiled walls or FRP channel/termination strips
- All pieces have a fine 220 grit finish on the face to increase adhesion of coatings
